Aravindh Jawahar

AI Product Engineer | RAG · LLM Agents · MCP · Claude API · Ruby on Rails · Node.js/Express · React · Python
Email: j.aravindh@zohomail.com | **LinkedIn:** linkedin.com/in/aravindh-jawahar | **Phone:** +91 8870637220 | **Location:** Chennai, India

PROFESSIONAL SUMMARY

- **Multi-Stack Senior Software Engineer** with **6 years** of production experience across **Ruby on Rails, Node.js/Express.js, React.js, Vue.js/Nuxt.js, TypeScript**, and **Python** — delivering web and **Windows desktop** applications across fintech, aviation manufacturing, and enterprise SaaS.
- **End-to-End Ownership:** Led **4 full-cycle product builds** across **3 companies** — from business requirements, tech specs, and API design to CI/CD, Kubernetes deployments, monitoring, and production support — with **100K+ daily users** at peak load.
- **Growth & Platform Engineering:** Built SEO/AEO, **Braze** lifecycle campaigns, **Contentful/Strapi** CMS pipelines, **Elasticsearch** search, and **Growthbook** experimentation — contributing to a **25% conversion uplift** for **SCB** and **MSIG**.
- **AI-Native Engineering:** Built a **RAG-powered conversational assistant** with **Claude API tool use**; daily **Claude Code** user for agentic development; built **MCP servers** for internal tooling and **LangGraph** + **N8N** workflows for AI-assisted automation.
- **Performance & Reliability:** Reduced load times by **40%** via Core Web Vital optimisation (**Debugbear + GSC**) and **Cloudflare** caching; cut deployment time by **70%** with CI/CD; sustained **99.9% uptime** across **Kafka/Karafka**-driven services.

TECHNICAL SKILLS

Category	Technologies & Tools
Languages & Runtimes	JavaScript (ES2020+), TypeScript, Ruby, Python 3, Node.js 14/16/18/20, SQL
Backend Frameworks	Ruby on Rails 6/7, Node.js/Express.js 4, REST APIs, Sidekiq, Karafka, BullMQ, Passport.js / JWT
Frontend & Desktop	React.js 16/17/18, Vue.js 3, Nuxt.js 2/3, Redux, Vuex, Tailwind CSS, Material-UI, PyQt5 (Windows)
Databases & Search	PostgreSQL 14+, pgvector, Redis, Elasticsearch, DynamoDB, SQLite, Kafka / KafkaJS
CMS, CRM & Marketing	Contentful, Strapi, Braze Campaigns, Freshsales CRM, Segment, Growthbook (A/B Testing)
AI & Automation	Claude Code (Agentic), Claude API (Tool Use), RAG Pipelines, Vector Embeddings, MCP Servers (TypeScript), LangGraph, N8N, GitHub Copilot, Prompt Engineering
DevOps & Observability	Docker, Kubernetes, AWS (S3, Lambda), Cloudflare (Workers, Caching), CircleCI, Jenkins, Airbrake, Datadog, Kibana, Sentry
Testing & SEO	RSpec, Capybara, Jest, Supertest, Cypress, Playwright, pytest · Google Search Console, Debugbear, Schema.org JSON-LD

EDUCATION

- **Master of Science (M.S) in IT Project Management & Development** — ESAIP Graduate School of Engineering, Angers, France (2019 – 2021)
- **Bachelor of Engineering (B.E) in Computer Science & Engineering** — Anna University, Chennai, India (2014 – 2018)

PROFESSIONAL EXPERIENCE

Francium Tech Pvt Ltd, Chennai **Jan 2022 – Present**

Project: ***MoneySmart — Fintech Comparison Platform (Singapore & Hong Kong)*** *Jan 2022 – Present*

Technologies: Ruby on Rails 7, Vue.js 3, Nuxt.js 2/3, React.js, Node.js/Express.js, TypeScript, PostgreSQL 14, pgvector, Redis, Elasticsearch, Sidekiq, Karafka, BullMQ, Docker, Kubernetes, AWS, Cloudflare Workers, CircleCI, Airbrake, Braze, Segment, Freshsales CRM, Contentful, Strapi, Growthbook, Google Search Console, Claude API, Claude Code, MCP Servers, N8N, LangGraph

- Senior engineer and **repository owner** for a platform serving **100K+ daily users** — owning features end to end from **business requirements and tech specs** through delivery, release, and **success-metric tracking**, while mentoring teammates on technical initiatives.

AEO / SEO Visibility Project:

- Led a **4-engineer team** end-to-end to build **Answer Engine Optimisation** features — implementing **JSON-LD schema** (Financial, WebPage, BreadcrumbList, ItemList/Product) across **300+ pages**, improving AI search visibility and organic CTR.
- Fixed **Nuxt 3 SSR** gaps where client-only rendering hid comparison-page content from crawlers; measured via **Google Search Console + Debugbear**, achieving **LCP < 2.5s** and **CLS < 0.1** with **Cloudflare** edge caching.
- Automated SEO meta titles and descriptions with **N8N** AI workflows fed by live product data, with length, keyword, and claim validation plus human review before publishing.

AI Assistant — ms-chat-agent (RAG):

- Built a **Retrieval-Augmented Generation** pipeline grounding the assistant in MoneySmart's own data — **chunking, embedding, and indexing** product content, FAQs, and guides in **pgvector** for semantic retrieval.
- Designed the agent's **Claude API / MCP tool layer** — **Active Channels**, **DB Mapping** (provider & category–product), and **Product Details** (fees, features, campaigns) tools for live SG/HK product data.
- Implemented **hybrid routing** (vector retrieval for knowledge questions, tool calls for fast-changing fees and promos) behind **streaming APIs** with **Redis** caching and guardrails for source-grounded answers.

End-to-End Purchase & Partner Integration:

- Owned full purchase flows for **Starr Insurance, MSIG Insurance**, and **TIQ Insurance** — integrating partner APIs, handling **Stripe** payment collection, order confirmation, and transactional email processing end-to-end.
- Integrated **Standard Chartered Bank** Credit Card apply-flow via **SCB API** — tracking application status per user with **Karafka** event streaming to the data lake for **Holistics** dashboard reporting.
- Synced leads and application status into **Freshsales CRM** via **Sidekiq** background jobs; tracked funnel performance with **Segment** analytics, contributing to a **25% conversion rate uplift** for key insurance products.

Content, Search & Customer Engagement:

- Built **Contentful** and **Strapi** CMS integrations so the content team publishes without engineering releases, including **Tiptap/ProseMirror** rich-content rendering in Nuxt; implemented **Elasticsearch** indexing with relevance tuning for product and article search.
- Delivered **Braze** lifecycle and promotional campaigns — event-triggered emails with deliverability tuning and **frequency capping** to protect sender reputation.

New Comparison Experience & Experimentation:

- Revamped shop/comparison pages with new UI and updated data contracts; provided **architectural guidance** and acted as **senior technical lead** for the squad.
- Implemented **Growthbook A/B split testing** with SSR anti-flicker handling — enabling data-driven UI decisions across **Singapore and Hong Kong** markets, with audit-logged feature flags.

- Led a phased, **zero-incident deprecation** of the recommendations / AI benefits feature across **4 repositories** and separate SG/HK databases, using feature flags for safe rollout and data cleanup.

Platform Reliability & Performance:

- Traced **Sidekiq OOM** crashes to glibc malloc arena fragmentation; resolved with **jemalloc** and retuned **Kubernetes** resource limits, stabilising worker memory in production.
- Designed **idempotent Kafka/Karafka** and Sidekiq consumers (upserts, idempotency keys, dead-letter handling) for safe **at-least-once delivery**, sustaining **99.9% uptime**.
- Managed multi-layer caching across **Cloudflare Workers** (HTMLRewriter), **Redis**, and SSR for SEO-critical pages; built **Node.js/Express.js** microservices with **BullMQ** queues for PDF generation and email dispatch.

Rewards Store & AI Tooling:

- Built **Rewards Store** with **Talon.One** voucher engine + in-house **Shopify** products — end-to-end order management, Smart Points redemption, and external voucher partner onboarding.
- Built **MCP servers** exposing live SG/HK product data to LLMs, and a **TypeScript MCP server** for Sidekiq operations with scoped, blast-radius-limited actions; use **Claude Code** daily across multi-repo work.
- Integrated **N8N + LangGraph** workflows for AI-assisted support and content automation across team repositories.

Artus Meggitt, Avrillé, France **Mar 2021 – Sep 2021**

Project 1: *Manufacturing Order Lifecycle Management Platform (Web)* *Mar 2021 – Sep 2021*

Technologies: Node.js 14, Express.js 4, React.js 16, PostgreSQL 12, Knex.js, Passport.js / JWT, REST APIs, Jest

- Built a web application managing client orders through multi-phase production lifecycles in aviation manufacturing, from intake to delivery sign-off, as **sole full-stack developer** on-site in France.
- Developed **role-based access control (RBAC)** for floor operators, supervisors, and managers using **Express.js** middleware + **Passport.js/JWT**; improved API query performance by **40%** via **PostgreSQL 12** index tuning and query plan analysis.
- Gathered requirements directly from department users; redesigned engine production workflow screens in **React.js 16** via Agile sprints, with **Knex.js** schema migrations ensuring zero-downtime releases.

Project 2: *Shop-Floor Tooling & Inspection Desktop Application (Windows)* *Mar 2021 – Sep 2021*

Technologies: Python 3, PyQt5, Qt Designer, SQLite, PostgreSQL 12, REST APIs, PyInstaller, pytest

- Developed a **Windows desktop application** in **Python + PyQt5** for floor operators to record tooling usage, inspection checks, and order-phase updates directly at workstations.
- Built **offline-first** capture with local **SQLite** and background sync to central **PostgreSQL** via the platform's REST APIs, keeping web and desktop in step.
- Designed validated UIs in **Qt Designer** to reduce entry errors; shipped builds via **PyInstaller** with **pytest** coverage.

CADS Software India Pvt Ltd, Chennai **May 2018 – Jan 2019**

Project: *KPI Tracking & Management Reporting Platform* *May 2018 – Jan 2019*

Technologies: Node.js 12, Express.js 4, React.js 16, PostgreSQL 11, Docker, Jenkins, Airbrake, REST APIs

- Developed a multi-department **KPI consolidation platform** — ingesting sales metrics via scheduled **Node.js** import jobs into executive-level reporting dashboards.
- Built **Express.js 4** REST APIs on **Node.js 12** with **PostgreSQL 11** as primary store; used **materialized views** and indexed aggregates to cut repeated aggregation load by **~50%** under concurrent department usage.
- Built **React.js 16** dashboards with drill-down charts and department filters to track KPI trends across quarterly cycles.
- Built **Docker** + **Jenkins CI/CD** pipelines cutting manual deployment effort by **70%**; fixed N+1 queries flagged in **Airbrake**, speeding report generation by **35%**.
